

Five Issues:

1. Rubbish bins being full all the time

Causes: too many takeout bags during meal times, insufficient bins, irregular dorm cleaning schedules, lack of awareness.

2. Washing machines and dryer with clothes not taken

Causes: students forget, no reminder system, limited machines, don't want to move others' laundry.

3. Study rooms frequently occupied without use

Causes: students want the room for themselves.

4. Unstable Wifi in certain areas

Causes: bad router placement, lack of outdoor router.

5. Air-conditioner left running in empty classrooms

Causes: students forget, no motion sensors, lack of awareness.

I'll expand on the fifth one:

Air conditioners often constantly run in empty classrooms. It happens all the time. classes finish, or students finish using the room, people leaves, and the AC keeps running for hours. This is a huge waste of energy. Students and sometimes teachers simply forget to turn the units off when they leave, no classrooms have motion sensors like the study rooms that could switch the AC off automatically, and there's no reminders about how much energy this actually wastes.
